

## **Supplemental Guidelines IFA Global Markets to Safety Guidelines STATION-Berlin**

### **Stand Construction Permit**

Assuming that the design and use of the stand comply with Station's Safety Terms and Conditions, drawings are not required for approval of single-storey hall stands.

### **Stand Safety**

All event-related structures and exhibition stands, including equipment, special structures, exhibits and advertising media must be stably erected so that they do not pose a risk to public safety and orderliness, particularly to life and limb. The exhibitor/client is responsible for the structural safety and must provide proof thereof.

### **Stand Design**

Where the rear of a stand adjoins a neighbouring stand, its appearance must be neutral so that it does not have an adverse effect on the design of the other stand.

### **Construction Height**

The maximum height of the structures is 3.50 m in all halls.

The exhibitor / customer is obliged to install a white partition separating his stand and the directly adjacent stand, as well the rear wall, or any wall facing public area. This partition shall be structurally stable, have no visible gaps and bear no advertising of any kind.

### **Suspended objects**

Objects suspended from hall ceilings are prohibited.

### **Fire Protection**

It is forbidden to use any materials that are highly inflammable or that form burning droplets or toxic gases and/or smoke such as polystyrene hard foam (Styrofoam), PVC, acrylic glass (Plexiglas), etc. In case of fire, the materials employed must not cause dense smoke.

For reasons of safety, supporting structural elements may be subject to special requirements on a case-by-case basis (e.g., not flammable). It is forbidden to use plastic cable ties to fasten components subject to static loading.

All decorative materials must be flame-retardant in accordance with DIN EN 13501-1 with a minimum rating of class C –s3, d0 or DIN 4102-1 with a minimum rating of B1 (non-burning droplets). Decorations with regular flammability ratings may be used in certain areas if they are sufficiently protected against catching fire. All test certificates with the material ratings must be kept ready at hand.

### **Flying Objects**

It is forbidden to operate remote-controlled flying objects (drones, UAVs, etc.) in all public areas of IFA Global Markets. The operation of remote-controlled flying objects in a separate, non-accessible part of IFA Global Markets is subject to approval.

Operating remote-controlled flying objects without prior consent is subject to a €2,000 fine.

### **Mobility Aids**

It is forbidden to use roller skates, bicycles, inline skates, skateboards, kickboards, pedal scooters, electric scooters, Segways etc. to move around the premises without the prior written consent of the trade fair management.

The exhibitor will be fined €2,000 for any infringements.

### **Changes to Non-compliant Structures**

Any stand structures that have not been approved or do not comply with safety requirements or laws, must be changed or eliminated if necessary. If the work is not performed in a timely manner, the trade fair management is authorised to make the required changes at the expense of the lessee.
